

Korea Luxis Tech

Utilizes globally patented super-ion technology (coldplasma, warmplasma) to safely and effectively enhance skin vitality, creating perfect skin texture.

Introduction

Your success is our success.
당신의 성공이 곧 우리의 성공입니다

Luxis Plasma Originating from South Korea

Developed in South Korea in 2018, Luxis Plasma has focused on plasma technology for seven years, employing a globally innovative super-ion technology to comprehensively address suboptimal skin health issues. Its devices are widely used in beauty salons and medical institutions worldwide.

With over 20 treatment options, Luxis Plasma provides personalized, one-on-one solutions to help customers address their skin concerns effectively.

Dedicated to in-depth research in the field of medical aesthetics, Luxis Plasma has gained extensive clinical experience, leading to the development of advanced products and beauty devices. The brand is committed to creating all-encompassing skin care solutions.

**Years of focus on
clinical trials for
facial and body skin.**

**A diverse and
comprehensive
product line.**

Luxis Plasma

Activating the Power
To transform Your Skin

Your success is our success.
당신의 성공이 곧 우리의 성공입니다

Plasma is the fourth substance that makes up 99% of the universe and is a powerful natural purification tool.

Plasma, often referred to as the fourth state of matter after solid, liquid, and gas, is a next-generation energy source garnering significant attention in medical and beauty fields.

Notably, lightning serves as a powerful natural purifier, capable of rapidly cleansing large volumes of pollutants in the air.

Clinical achievements
of Luxis plasma

NO.1

Luxis Plasma products are widely used in leading beauty salons and dermatology clinics worldwide.

NO.2

The concept of plasma skincare has become a global sensation.

NO.3

Over 1,200,000 people use it daily.

NO.4

It boasts extensive clinical experience and remarkable achievements.

Your success is our success.

당신의 성공이 곧 우리의 성공입니다

Luxis Plasma: Advanced Plasma Technology

Plasma is a gas-like state composed of ionized atoms. Ionization occurs when a gas gains enough energy for electrons to escape from their atoms, leaving the atoms positively charged. When an electron is "recaptured" by a positively charged atom, energy is released through the vibration and rotation of gas molecules. This heat energy transfers to the skin's surface, stimulating cellular activity, aiding in the regeneration of new cells, and metabolizing waste and aging cells, effectively enhancing the skin's circulation.

The harmful substances accumulated under the skin due to prolonged cosmetic use and the inflammation caused by cosmetic procedures can be significantly improved. Plasma penetration helps bind moisture and nutrients tightly to every cell, leaving the skin hydrated, radiant, and transparent while addressing problematic and aging skin concerns.

Your success is our success.
당신의 성공이 곧 우리의 성공입니다

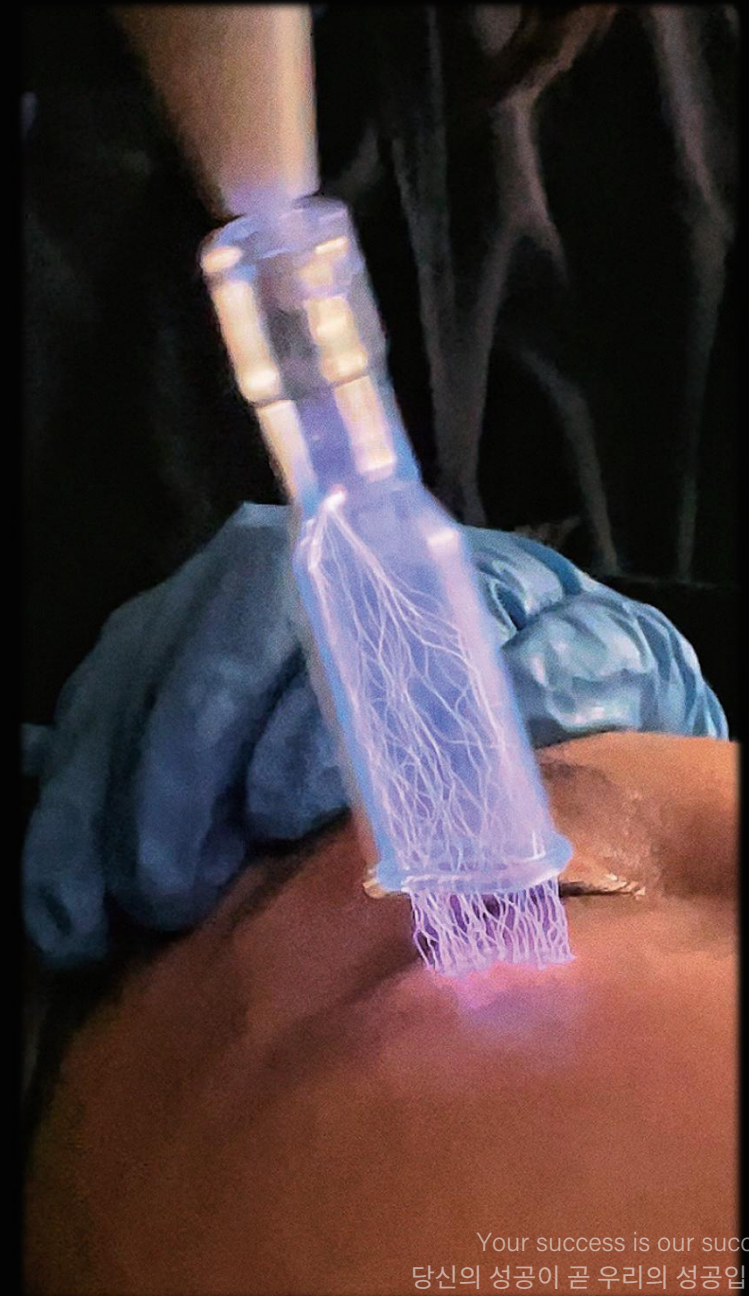

Core Technology

The greatest advantage of non-ablative plasma technology lies not only in its remarkable efficacy but also in the fact that it imposes no restrictions or specific requirements on skin type or condition.

This innovative treatment is safe, comfortable, painless, and non-invasive, with no downtime, making it suitable for a wide range of beauty settings.

With precise targeting of dermal cells, this advanced plasma beauty device penetrates and stimulates superficial cells, promoting cell regeneration and aiding in the repair of damaged cells to reconstruct healthy skin.

Your success is our success.
당신의 성공이 곧 우리의 성공입니다

Advantages and Effects of Plasma Treatment

- Reduction of Surface Bacteria and Harmful Microorganisms
- Significant Anti-Aging Effects
- Soothing Irritated Skin and Effectively Improving Sensitive Skin
- Improvement of Uneven Skin Tone, Enlarged Pores, and Overall Skin Texture

Proprietary technology

The Secret Behind Luxis Plasma Core Technology

The uniqueness of Luxis plasma lies in its combination of 99.999% high-purity inert gas from nature and the fourth state of matter. When the gas passes through the patented handpiece, it is energized by a high-frequency ion generator, producing high-purity, low-temperature plasma.

This plasma is expelled through the handpiece nozzle, releasing unique instant-cooling thermal pulses. These pulses deliver energy to the skin in a controlled, uniform manner, creating dual energy effects to address a variety of skin concerns effectively.

Applications of Luxis Plasma

For Face :

1. Acne comedonica
2. Anti-aging
3. Regeneration
4. Acne scars

For Body :

1. Eczemas
2. Hypertrophic scars/keloids
3. Skin tightening body
4. Contusion
5. Chronic leg ulcer/ulcus cruris
6. Sonophoresis body
7. Skin rejuvenation
8. Sonophoresis face
8. Stretch mark

Luxis Plasma : Four Key Application Areas - Acne Treatment

Target Patients:

Sensitive skin, acne-prone skin, blemishes, acne scars, dermatitis, perioral dermatitis, eczema, etc.

Reduces surface skin bacteria and harmful microorganisms:

During the ionization process, ozone is generated, which provides significant antibacterial and anti-inflammatory benefits. In a groundbreaking experiment, after just 2 minutes of treatment with cold atmospheric plasma, the bacterial load in plasma-treated wounds was reduced by 40%, covering multiple bacterial strains.

Benefits:

- 1) Skin cleansing and oil control
- 2) Treatment of inflammatory acne-prone skin
- 3) Relief for allergic dermatitis and eczema
- 4) Support for skin wound healing

Luxis Plasma

Skin Aging Is Caused by Three Main Issues

Reduction in Hyaluronic Acid (GAGS)

Leads to dry skin, decreased elasticity, and triggers dryness and sensitivity.

Excessive Proliferation of Proteolytic Enzymes (MMPS)

Causes thinning of the skin barrier, reduced elasticity, and various skin problems, such as acne-prone and inflammatory skin conditions.

Decreased Skin Regeneration Rate and Product Absorption (HSPS)

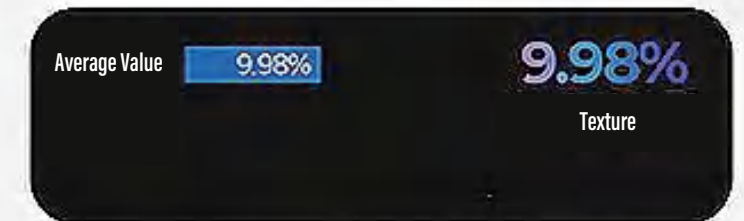

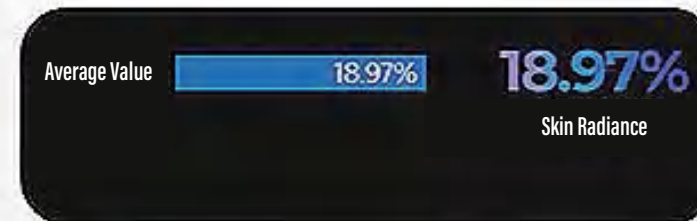

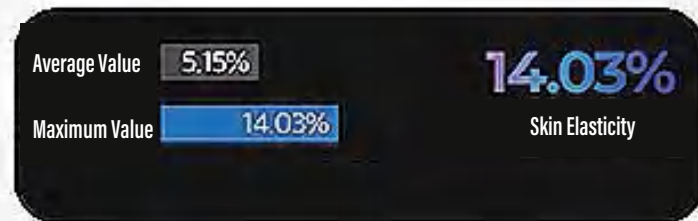

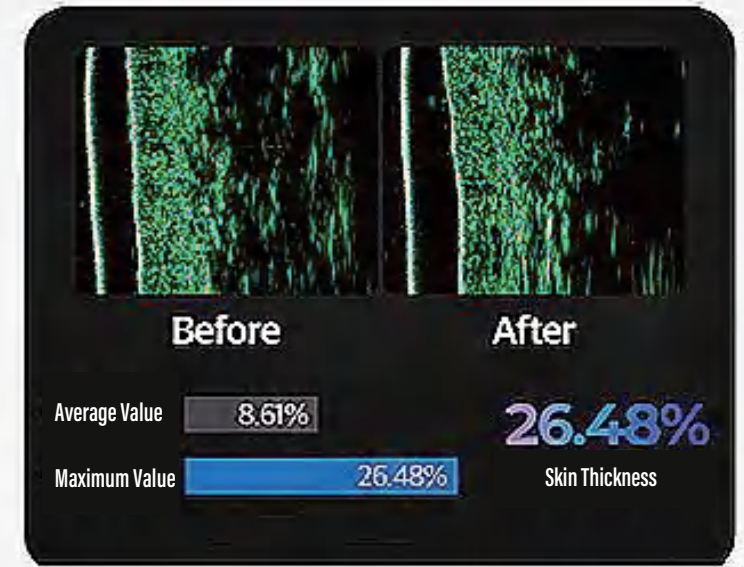

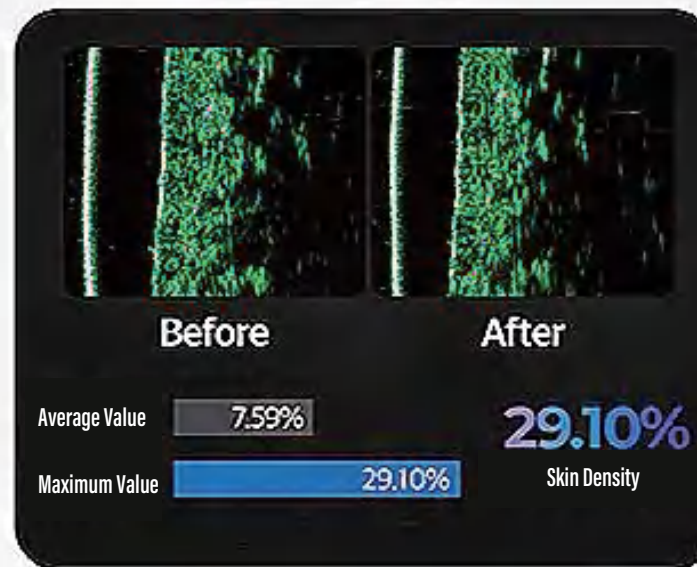

Results in slower skin recovery, higher sensitivity to irritants, hyperpigmentation, increased wrinkles, and reduced absorption of skincare products.

2. Luxus Plasma - Four Key Application Areas: Collagen Regeneration

Suitable for:

Fine lines, deep wrinkles, enlarged pores, sagging skin, stretch marks, obesity-related striae, and cellulite.

Plasma acts on the skin by allowing active helium and oxygen ions to penetrate more easily through pores and reach deep layers of the skin, catalyzing the regeneration of fibroblasts.

Additionally, the plasma arc creates mechanical and thermal effects on the skin, stimulating the growth of collagen, elastin, and hyaluronic acid. This effectively reduces fine lines and wrinkles caused by photoaging and natural aging processes.

Luxis Plasma

Pre-Treatment with Luxis Plasma:

- Regulate pre-treatment condition
- Alleviate and eliminate discomfort
- Enhance product absorption
- Prevent and reduce side effects

Post-Treatment with Luxis Plasma

- Penetrate deeply to regenerate and repair skin
- Shorten post-treatment recovery time
- Reduce inflammation symptoms
- Maximize the effects of pre-treatment procedures

Your success is our success.
당신의 성공이 곧 우리의 성공입니다

3. Luxis Plasma - The Four Key Applications · Repair

Applicable for:

Enhancing product absorption, preventing and reducing side effects, alleviating and eliminating discomfort, regenerating and repairing skin, shortening post-treatment recovery time, reducing inflammation symptoms, and maximizing the effects of pre-treatment procedures.

Plasma acts on the skin to create micro-wounds that promote the repair of skin barrier functions and stimulate collagen regeneration, increasing the skin's tolerance to external irritants for a soothing effect.

Additionally, the ozone produced during treatment has antibacterial and anti-inflammatory properties, which are particularly beneficial for sensitive skin often prone to underlying inflammation. During the procedure, active oxygen is released upon contact with the skin, providing simultaneous surface disinfection and deep hydration benefits.

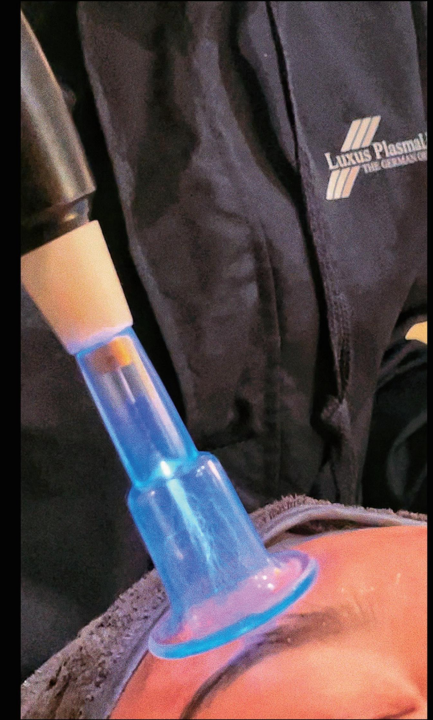

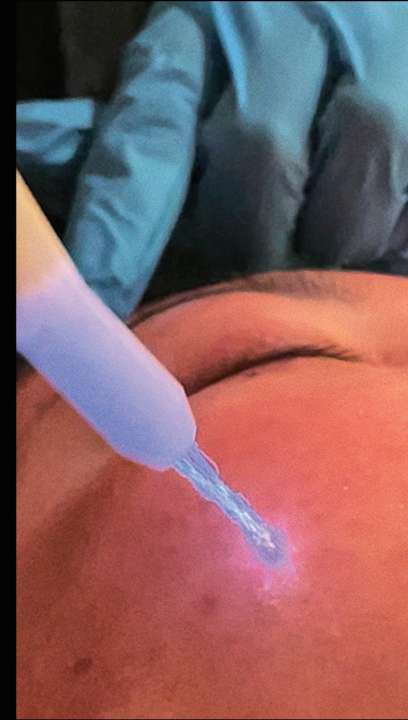

Repair management

Your success is our success.
당신의 성공이 곧 우리의 성공입니다

- Pigmentation Reduction

Your success is our success.
당신의 성공이 곧 우리의 성공입니다

Luxis Plasma

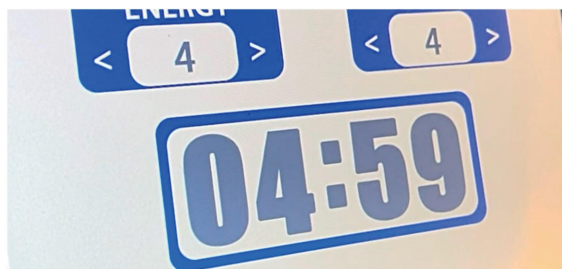

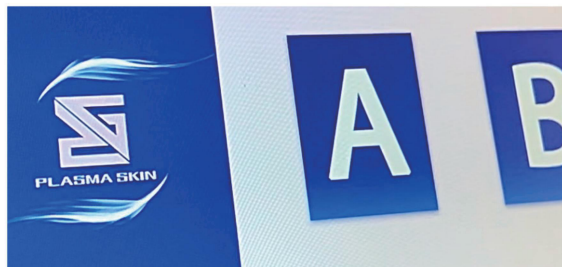

Luxus While plasma energy acts on the deep dermis, it also stimulates collagen regeneration, and fibroblasts release growth factors and cytokines to promote the formation of elastin and collagen. After contact with the skin, the high-energy plasma can be transferred to the surface of the skin, forming a controlled non-gasification exfoliation with a depth of 100-150um in the epidermis and superficial dermis of the skin, that is, the "micro-exfoliation zone", which can remove the pigmentation of the dead skin and generate thermal effects to stimulate the dermis of the skin. Promote the proliferation, repair and rearrangement of collagen and elastic fibers in dermis.

Your success is our success.
당신의 성공이 곧 우리의 성공입니다

Luxis Plasma

Luxis plasma can not only choose one mode to operate according to your skin problems, but also operate in a dual-mode combination, and can also be combined with products, medical aesthetic treatments, and laser treatments for better results.

Luxis Plasma + Product

Luxis Plasma + Medical aesthetic treatments

Luxis Plasma + Laser treatments

4. Luxis plasma light-Four major application areas

- Pigmentation reduction**

Applicable for:

Hypertrophic scars, pigmentation, etc.

Under the action of the pulse of energy, the plasma body can transmit heat to the lower layer of skin, shrink dermal collagen, promote amine remodeling and epidermal reconstruction, achieve the effect of shrinking pores, make the skin delicate and smooth, enhance skin microcirculation, and improve skin roughness.

In addition, the plasma beam promotes cell metabolism and renewal, enhances skin elasticity, and improves uneven skin tone and pigmentation.

Pigmentation Reduction

- Hair Treatment

Luxis Treatment---Hair treatment

Luxis Plasma

The Luxus Plasma device offers hair treatments through its nine specialized heads:

- Hair and Eyebrow Growth Stimulation:
Promotes new growth by stimulating hair follicles.
- Hair Loss Prevention:
Strengthens hair roots to combat male and female pattern baldness.
- Dandruff and Scalp Health:
Reduces dandruff and purifies the scalp.
- Skin Disinfection:
Treats fungal infections, eczema, and other skin conditions.

Experience the transformative power of LUXUS PLASMA'S advanced technology, redefining professional haircare standards.
